[2] As the Clinical Quality Measure analyses are not audited, these are considered "HEDIS-Like" data as opposed to "HEDIS."

[3] "HEDIS Acronyms" are the three-letter designations used by the National Committee for Quality Assurance to uniquely identify HEDIS measures.

* "Hybrid measure" for which carriers gather additional information from patients' medical records for HEDIS. "Hybrid measure" are more difficult for HCDSS to report accurately due to requirement of additional data sets.
