Item Name: Annual Review of Funding Levels and Risk Report
Program: Actuarial Office
Item Type: Information

Executive Summary
This annual report provides a comprehensive summary of the current funding levels of the system and the near-term outlook for required contributions. In addition, the report provides important information regarding the risks faced by the system in the near and long-term. By understanding these risks, CalPERS and its agencies can effectively consider whether additional measures can be taken to further reduce risk and increase sustainability of the system.

As discussed in this report, factors such as 1) investment losses for the year ending June 30, 2022, 2) current high inflation, 3) lingering impacts of the Coronavirus pandemic, and 4) potentially unfavorable near-term economic conditions, may result in CalPERS' employers experiencing difficulty making required near-term contributions, particularly if those required contributions increase due to any of these factors.

Strategic Plan
This item is presented as part of the regular ongoing workload of the Actuarial Office and supports the Strategic Plan goal of Pension Sustainability of the pension fund.

Background
To assist the Finance and Administration Committee with its oversight of the financial soundness of the overall CalPERS system, the Annual Review of Funding Levels and Risks Report was developed. Included in this report are various system level actuarial results and risk measures that can be used to assess the effectiveness of funding policies, actuarial assumptions and methods.

CalPERS must ensure that the pension fund is sustainable over multiple generations. This is done by taking an integrated view of assets and liabilities and taking steps designed to mitigate risks over the long-term. The CalPERS asset allocation and actuarial assumptions are
continually monitored and reviewed every four years during the Asset Liability Management (ALM) cycle. The most recent cycle was completed in late 2021 through early 2022. The Annual Review of Funding Levels and Risks report tracks the emerging experience of the system through this four-year cycle and highlights relevant risks.

Analysis

Current Actuarial Results

The unfavourable investment returns during the year ending June 30, 2022 resulted in decreases to the funded ratios for CalPERS plans. The total PERF funded status decreased from 81% as of June 30, 2021 to 72% as of June 30, 2022. Each plan has its own funded ratio based on the assets and accrued liabilities of that plan. Some plans are better funded than the PERF average and others are not. Employer contribution levels are expected to increase over the next several years for most plans due to the investment loss for the year ending June 30, 2022.

COVID–19 Pandemic

The pandemic has affected the experience of the retirement system over the last couple of years. The number of deaths among CalPERS retirees was higher over the last two years than expected. In addition, various aspects of the pandemic affected the behavior of many active members, in particular, with respect to retirement decisions. Going forward it remains to be seen if there will be any lingering impact on the experience of the system. The actuarial valuations performed as of June 30, 2021 showed small gains as a result of excess mortality. We expect a similar result when the June 30, 2022, valuations are performed. During the next Experience Study, we will examine whether there is sufficient evidence to change any of the actuarial assumptions based on experience up to that point.

Other Risks

Over the next several years there is the potential for various factors to either further increase required contributions or add additional financial strain on employers and their ability to make required contributions. Two of these factors are inflation and near-term economic decline.

Inflation has recently risen to a 40-year high and attempts by the Federal Reserve to lower inflation have been less effective than desired up to this point. It is unknown how much longer high inflation will persist. CalPERS and its members are potentially impacted by high inflation in several ways. Many retirees are likely to receive higher cost-of-living adjustments (COLAs) but will likely still lose purchasing power. Higher COLAs result in higher contributions for employers. In addition, employee wages generally keep pace with inflation over the long-term. It is likely that members pay will increase faster than currently expected. The report provides various estimates of employer contribution increase under various high inflation scenarios. The results indicate possible increases of 2%-12% of payroll on average over the next several years.

Many forecasters are predicting an economic slowdown in the near future. This could lead to potentially lower investment returns, increased investment volatility, and higher unemployment. Much of the discussion within this report is devoted to projecting funded ratios and contribution levels under various scenarios for future investment returns. If the system experiences lower than expected investment returns, the potential impact on required contributions, combined with
the possible impacts of high inflation, could push contribution rates to levels that would prove challenging for some employers.

The inability to make required contributions puts a plan at risk for termination. The termination policies and processes currently in place mitigate risks to the system. However, if an employer is under severe financial stress, the termination policies cannot fully protect the benefits of members that have served that employer. Ultimately, the members’ benefits are only secure if the employer continues to make the required contributions.

**Budget and Fiscal Impacts**

This section is not applicable to this agenda item.

**Benefits and Risks**

This agenda item and the attached report should enhance the understanding of the risks inherent in the funding of the system. Such an understanding is necessary for effective management and mitigation of those risks.
