Capital Market Overview

U.S. Equity Market

The U.S. stock market, represented by the Wilshire 5000 Total Market IndexSM, was down -14.29% for the fourth quarter of 2018 and -5.27% for the year. This marks the worst quarter for U.S. equities since 2011 and the first down year since the credit crisis sell-off of 2008. The index had been down by double-digits for the year in late-December before gaining nearly 7% during the final few trading days. Concerns of an economic slowdown weighed on stock prices as did fears that additional rate increases by the Federal Reserve could weaken future prospects for economic growth. Ongoing trade negotiations between China and the U.S. continued to be a factor affecting market activity during the quarter with the eventual resolutions standing as a major unknown entering the new year.

Large capitalization stocks far outperformed small caps for the quarter as the Wilshire Large-Cap IndexSM was down -13.69% versus a loss of -19.67% for the Wilshire US Small-Cap IndexSM. The large-cap segment of the market leads small-caps for the past twelve months, as well. The Wilshire US Micro-Cap IndexSM was down -23.50% for the quarter and -15.58% for the one-year. Growth stocks trailed value, generally, during the fourth quarter but outperformed during the past twelve months.

Nearly all of the eleven major sectors were in negative territory during the fourth quarter. The only positive sector was Utilities (+0.8%) with Energy (-25.6%), Industrials (-18.2%) and Information Technology (-17.5%) down the most.

Fixed Income Market

The U.S. Treasury yield curve fell across most maturities during the quarter with the biggest decreases occurring in the intermediate to longer segment of the curve. The bellwether 10-year Treasury yield ended the quarter at 2.69%, down 37 basis points from September. The Federal Open Market Committee decided to increase its overnight rate by 25 basis points in December to a range of 2.25% to 2.50%. The committee adjusted their forecast for future rates, communicated through their "dot plot," from three rate increases in 2019 to only two. Credit spreads widened during the quarter within both the investment grade and high yield markets.

The yield curve ended 2018 with a very unusual shape – which will likely be a source of debate if it persists, largely focusing on the Fed's December rate hike. Some fear that it could be enough to slow the economy and are therefore selling shorter-term bonds, pushing rates higher. Others highlight the fact that the Fed's mandate focuses on both growth and inflation and that a 0.25% increase is not likely to stop the U.S. economy cold. While history has shown that an inverted curve often precedes a recession, the time between the events can be as much as a year. Also, the Fed makes their final decisions based on all available data and can decide to adjust their course of action.

Non-U.S. Markets

Equity markets outside of the U.S. also suffered during the fourth quarter of 2018, although they generally outperformed the U.S. equity market. For all of 2018, however, foreign equities significantly underperformed, falling by double digits. While the European Union began the year in sound condition, economically, growth declined steadily during the year while gains in unemployment stalled and industrial production reversed course. News out of Japan was grim with a report showing a serious economic contraction during the third quarter that threatens to end Japan's longest expansion since the 1980's. Emerging markets actually led global equity for the quarter but still exhibited a meaningful loss. While there were some positive signals on the U.S.-China trade front, investors will likely wait until after a scheduled meeting in January between the two countries before fully evaluating the current global trade environment.

Real Assets Markets

Real estate securities outperformed broader equities during the quarter but were still down in absolute terms. The same is true for 2018 although Real Estate maintained only a slight margin. Commodity results were down for the quarter as crude oil fell -38.0% to \$45.41 per barrel. Natural gas prices were down -2.3%, ending the quarter at \$2.94 per million BTUs. MLP returns were in negative territory for the quarter (-17.30%) and are down double-digits for the year. Finally, gold prices were up and finished at approximately \$1,281 per troy ounce, up +7.1% from last quarter.

² The Total Fund Policy Benchmark return equals the return for each asset class benchmark weighted at the current target asset allocations.

³ Growth Policy Benchmark equals the benchmark returns of public equity and private equity weighted at policy allocation target percentages. ⁴ The Public Equity Policy Benchmark is a custom global benchmark maintained by FTSE.

⁵ The Private Equity Policy Benchmark is currently 1-guarter lagged (67% FTSE US TMI + 33% FTSE AW x-US TMI) with a hurdle of + 3%.

- ⁶ The Income Policy Benchmark equals the benchmark returns of domestic and international fixed income components weighted at policy allocation target percentages.
- ⁷ Real Assets include real estate, whose returns are net of investment management fees and all expenses, including property level operations expenses netted from property income. This method differs from GASB 31, which requires all investment expenses be identified for inclusion in the System's general purpose financial statements.
- ⁸ The Real Assets Policy Benchmark is currently PREA/IPD U.S. Quarterly Fund Index NTR. Prior to 7/01/2018 it was the benchmark returns of real estate, timber, and infrastructure weighted at policy allocation target percentages.

⁹ The Inflation Policy Benchmark equals the benchmark returns of commodities and TIPS weighted at policy allocation target percentages. ¹⁰ The Liquidity Policy Benchmark is a custom index maintained by State Street Bank.

¹¹ The Absolute Return Strategies program was excluded from Public Equity on July 1, 2011. Public Equity history does not include Absolute Return Strategies performance. The Absolute Return Strategies Policy Benchmark is currently Merrill Lynch Treasury 1-Year Note + 5%.
 ¹² The Total MAC Custom Benchmark is currently the CalPERS Reference Portfolio. Prior to 7/01/2018 it was Absolute 7.5%.

¹³ VaR (Value at Risk) measures how much the portfolio might decrease over a 12 month period in extreme cases. The VAR estimate shows how much the portfolio value might fall in the worst 5% of 12 month periods. VAR is calculated using total risk (standard deviation) and market value ((Expected Return – (1.65 X SD)) X MV).

- ¹⁴ The Sharpe Ratio or reward-to-variability ratio is a measure of the mean excess return per unit of risk in an investment strategy. The Sharpe ratio is used to characterize how well the return of an asset compensates the investor for the total risk taken. The 5-year period was selected to provide sufficient data points for a meaningful calculation, but is still short enough to reflect the changes to the investment programs over the last few years.
- ¹⁵ The "Information Ratio" calculates the amount of excess performance earned per unit of excess risk, as measured by tracking error. Higher information ratios imply a greater return per unit of excess risk ventured.

California Public Employees' Retirement System Total Fund Attribution - Quarter As of 12/31/2018

The Total Fund Attribution displays the return contribution of each asset class to the total fund. This is done by monthly linking each program's allocation at the beginning of the month with each month's returns to determine if tactical allocation and active management within asset classes helped or hurt performance. The interaction effect is a cross-factor, used to help further explain the combined impact of a portfolio's selection and allocation decisions within a segment.

California Public Employees' Retirement System Total Fund Attribution - Fiscal Year-to-Date As of 12/31/2018

The Total Fund Attribution displays the return contribution of each asset class to the total fund. This is done by monthly linking each program's allocation at the beginning of the month with each month's returns to determine if tactical allocation and active management within asset classes helped or hurt performance. The interaction effect is a cross-factor, used to help further explain the combined impact of a portfolio's selection and allocation decisions within a segment.

 The California Public Employees' Retirement System ("CalPERS, the System") generated a total fund return of -6.15%, for the quarter ended December 31, 2018. CalPERS' return can be attributed as follows:

-5.67%	Strategic Policy Allocation
-0.07%	Actual/Tactical Asset Allocation
-0.39%	Active Management
0.03%	Interaction
-0.03%	Trading/Currency Hedging
- 6.15%	Total Return

- The total fund attribution table on the previous page displays the return contribution of each asset class to the total fund. This table will allow the Board to see if tactical allocation and active management within asset classes helped or hurt performance during the quarter.
 - Strategic Policy: The contribution to total return from each asset class, calculated as the percentage allocated to each asset class multiplied by the benchmark for that asset class.
 - Actual Allocation: The return contribution during the quarter due to differences in the actual allocation from the policy allocation (i.e. the actual allocation to total equity was higher than the policy allocation). A positive number would indicate an overweight benefited performance and vice versa.
 - Active Management: The return contribution from active management. The number would be
 positive if the asset class outperformed the designated policy index and vice versa (i.e. the US
 fixed income segment outperformed its custom benchmark during the quarter and contributed
 positively to active management.
 - Interaction: Captures the interaction of managers' performance and asset class weighting differences.
 - Actual Return: The actual return of the asset classes if allocations to them were static during the quarter. These returns will not match exactly with the actual segment returns since asset class allocations change during the quarter due to market movement, cash flows, etc.
- Wilshire's attribution showed that active management was the primary factor that led to this quarter's relative underperformance, costing -39 bps. Almost all of this negative margin was attributed to the soft results of Real Assets and Growth (Private Equity in particular), as these asset classes' 4th quarter returns trailed their respective benchmarks by -178 bps and -37 bps respectively. Asset allocation variance was also a small negative, with a -7 bps detraction that mainly came from under-exposure to the mildly positive Real Assets segment (when most other risk assets fell during the quarter) as well as the System's small TLPM program which did not do so well in Q4.

Relative to the Total Fund Policy Benchmark:

- Growth Exposure: The favorable momentum enjoyed by equity investors for much of the year came to a crashing end during the fourth quarter. Primarily driven by political uncertainties and concerns of potentially weakening global growth, material weaknesses emanated from the U.S. early in the quarter and echoed through global markets, intensifying as the quarter wore on. Performance of the Growth composite was notably handicapped amid surging market volatility and plummeting investor confidence, closing out the quarter down -10.6%. This double-digit decline came in at the bottom of the leaderboard among the five major CaIPERS asset classes, and was below the total fund policy benchmark by -489 bps. Impact of the macro overhang was fully reflected in the Growth composite's public equity component, as it reported an overall loss of -12.5% for the quarter. For the third time this year, the private equity program posted better quarterly results with a 2.1% gain.
- Income Exposure: U.S. Treasury yields had steadily climbed to a multi-year high in early November, but took a U-turn in the second half of Q4 amid a rash of risk assets sell-off. Investors, spooked by potentially growth-snuffing development of an over-tightening Fed and the escalating US-China trade spat, as well as by some of the slipping forward-looking manufacturing surveys, scrambled for shelter in Treasuries and sharply drove down yield across most maturities. The drop in Treasury yields was a boost to CalPERS' Income asset class overall, which netted a 0.9% gain during Q4 that was on par with the Income policy benchmark while comparing favorably to the total fund policy benchmark.
- Real Assets Exposure: Quarterly returns of Real Assets has averaged in the high 1% range over the past two years, but coinciding with a general rise in market volatility and growth-concern driven derisking, its return notably dipped in the fourth quarter to just 0.1%. This limited rate of return missed Real Assets' own benchmark by a margin of -178 bps, but did still fare better relative to the -5.7% decline of the total fund policy benchmark. Looking beyond Q4's rare dip, Real Assets' trailing 12-months and 3-year returns stand on a more consistent pace of 4.2% and 6.1% respectively, and the overall asset class currently holds a 9.0% annualized gains over the past five years that is nearly on par with the asset class benchmark.
- Inflation Exposure: Similar to Growth, the Inflation asset class performance turned sharply lower in the fourth quarter in light of a -38% drop in crude oil prices and to a lesser extent, moderating inflation expectations (which is also due in part to weakening commodity prices). Inflation's -6.4% Q4 total return was marginally better than the asset class benchmark (-6.6%), but came in -76 bps behind the total fund policy.
- Liquidity: With a high correlation to short-term interest rates, which has steadily risen since the Fed kicked off the monetary policy normalization process and raising the Fed Funds Rate (with 4 hikes in 2018), the Liquidity asset class saw its return slowly climbed during this past year. Up 0.6% in Q4, this was Liquidity's highest quarterly return in nearly four years, finishing just ahead of its own asset class benchmark and compared favorably to the total fund policy benchmark's -5.7% rate. Starting Q3 2015, this composite is solely comprised of short-term investment funds.

External Multi-Asset Class Composite: Results of the System's Multi-Asset Class program (MAC) were soft this quarter, as it dropped -6.5% that was its worst quarterly finish over the last five years. This rate of return compared better than the program's own custom benchmark, but came in below the total fund policy benchmark.

Growth Review for PERF (continued)

Comments Regarding Growth Segment Performance

Helped Performance:

Private Equity Exposure: Riding on an 11-quarter streak of positive returns, CalPERS' private equity program saw its positive momentum moderated somewhat in the last quarter of 2018. Nevertheless, this program's 2.1% Q4 return continued the trend of producing modest yet steady gains for the System, and once again provided diversification benefit during this volatile period when public equities notably struggled. This quarter's gains compared very favorably to the Growth policy benchmark's - 10.2% return, and helped offset the public equity program's -12.5% decline.

Impeded Performance:

- U.S. Equity Exposure: U.S. stocks, once the sole bright spot within the global equity market, finally cracked under a host of old and new concerns. A continued disruptive trade policy in the pursue of economic nationalism and the Fed's rate-hiking determination triggered anxieties over weakening growth expectations, while rising political spat (over border wall funding that led to a partial U.S. government shutdown) further overwhelmed investor sentiment. The intertwined economic and political uncertainty led to a spike in volatility and weighed heavily on the broad U.S. stock market. Outside of a brief period of optimism following the November mid-term election, CalPERS' U.S. equity composite experienced sharp pullbacks in October and December to end Q4 firmly in the red, dropping -14.5%. This result was a near-image of the composite's own policy measure, but fell short of the Growth policy benchmark by -427 bps. Within the composite, the internal U.S. equity composite largely trended with the market and was down -14.3% for the quarter; the smaller external U.S. equity component saw a steeper decline and was -16.0% lower.
- International Equity Exposure: Similar to U.S. stocks, international equities also saw their performance hobbled by a range of issues in Q4. There were growth concerns from the slowing of bellwether German and Japanese economies, which occurred just when ECB concluded its QE bond purchasing program, plus political distractions generated by the Brexit negotiation impasse, Frances social unrest, doubts over left-leaning new Mexico president's ability to reform, and China's on-going trade tussles with the U.S. For the quarter, the international equity composite mimicked the struggle of its own custom benchmark to reach a -12.2% return, but missed the Growth policy benchmark's -10.2% return. Results

within the international equity segment were fairly similar, with the larger-sized internally managed composite retreating -12.3% while the smaller externally managed composite finishing down -12.0%.

Comments Regarding Income Segment Performance

Helped Performance:

 Government Bonds: The overall internal Treasuries and government-sponsored bonds portfolio was the clear beneficiary of Q4's safe haven-seeking rotation, rallying 3.1% for the quarter to finish atop the leaderboard among all PERS bond portfolios. This compared favorably to the Income policy's 0.9% return for the same period and was deemed a performance contributor.

²³ The Income Policy Benchmark return equals the benchmark returns for domestic and international fixed income components weighted at policy allocation target percentages.

²⁴ The US Fixed Income Policy Benchmark consists of the Barclays Long Liability Index and is linked historically to its prior benchmark.

²⁵ The Non-US Fixed Income Policy Benchmark consists of the Barclays International Fixed Income and is linked historically to its prior benchmark.

²⁸ The "Information Ratio" calculates the amount of excess performance earned per unit of excess risk, as measured by tracking error. Higher information ratios imply a greater return per risk ventured.

Income Review for PERF (Continued)

Comments Regarding Income Segment Performance

 Mortgage Bonds: Mortgage-backed securities weathered the volatile 4th quarter well and remains one of the better performing investment grade fixed income segments. The System's mortgage bonds portfolio generated the second highest return behind Treasuries, finishing up 1.9% this quarter and beat out the Income policy benchmark's 0.9% return. The smaller-sized long duration mortgage portfolio also produced solid gains of 1.1% and outperformed relative to the Income policy.

Impeded Performance:

- Corporate Bonds: This quarter's risk-off shift caused notable credit spread widening, and as a result most spread sectors were the laggards during Q4, highlighted by the -1.0% loss registered by CalPERS' \$16.6 billion corporate bond portfolio. The smaller long duration corporate bond portfolio behaved similarly, turning in a -0.7% return for Q4 that also detracted.
- High Yield Bonds: Non-investment grade credits fared poorly this quarter, as the previously tight high yield spreads meaningfully reversed course after early October. Both of the CalPERS internal and external high yield portfolios lost ground, giving up -2.8% and -4.6% respectively, and underperformed the Income policy benchmark for Q4.
- International Fixed Income / Sovereign Bonds: CalPERS' international fixed income and sovereign bonds portfolios held up well in the fourth quarter, gaining 0.3% apiece. Although in relative terms both trailed the Income policy benchmark's 0.9% return.

The sizable drop incurred by CalPERS' Inflation asset class during this past quarter was primarily influenced by its commodities exposure, which did not perform well in the second half of 2018. The commodities investments, albeit smaller in size (approx. 22% of Inflation's assets), experienced significant macro headwinds where both industrial metals and energy prices turned sharply lower during Q4 (with the collapse of oil prices in particular). As a result, all of the System's commodities portfolios registered declines in excess of 20% and weighed on Inflation's overall return. The rest of Inflation's assets, invested in inflation-linked bonds, behaved much milder this quarter but did also

³² VaR (Value at Risk) measures how much the portfolio might decrease over a 12 month period in extreme cases. The VAR estimate shows how much the portfolio value might fall in the worst 5% of 12 month periods. VAR is calculated using total risk (standard deviation) and market value.

- ⁴³ The "Information Ratio" calculates the amount of excess performance earned per unit of excess risk, as measured by tracking error. Higher information ratios imply a greater return per unit of excess risk ventured.

The Real Assets asset class's performance often displays a high degree of correlation with the Real Estate component (one of the three programs within RA), given that the latter represents nearly 84% of this asset class's assets. Q4's results did not deviate too far from this pattern, as Real Assets posted a - 178 bps under-performance and finished essentially flat amid weaknesses from the Real Estate portfolio, which surprisingly broke a long trend of steady positive gains to record its first quarterly loss (of -0.3%) in more than eight years. The Forestland portfolio's -1.1% return was also a small detractor, but its drag was easily offset by the 3.2% total return earned by the Infrastructure portfolio, which has enjoyed positive momentum throughout 2018.

^{*} JRS I maintains a reserve balance of approximately two months of benefit payments. Prior to 2009-2010 fiscal year, the fund held approximately one month of benefit reserve with the majority of funds held at the State Treasurer's Office. The cash balance experienced spikes in 2010 due to delayed passage of the 2010-2011 fiscal year budget by the Legislature, which the Governor signed on October 8, 2010.

Commentary – Judges II

- Volatility rocked most major asset classes during the fourth quarter of 2018, where plummeting investor sentiment resulting from a myriad of growth-blunting concerns prompted sharp pullback in risk assets. The continued stimulus withdrawals/rate hikes by global central banks, downside surprises on growth in major developed ex-US and emerging economies, political uncertainties in the U.S. and elsewhere, and the broad-reaching negative implications of the U.S.-China trade dispute all contributed to mounting investor angst as 2018 drew to a close. These concerns of a lack of clarity on global economic health triggered a rout in global equities and other risk assets that also adversely impacted the Q4 results of the Judges II ("JRS II, the Plan"). The Plan, with approximately one third of its assets invested in stable core fixed income instruments, ultimately surrendered -7.5% this quarter due to sizable losses incurred by its equities and commodities portfolios. The Plan's weighted policy benchmark was also down sharply for the same period, but came in at a slightly steeper drop of -7.7%. Despite Q4's sizable (but unusual) losses, there are currently no concerns with JRS II's performance over longer-term horizon, where it has averaged returns near the mid-single digit range that also compare well against the policy benchmark.
- At the end of Q4, Judges II's asset allocation showed small overweight in U.S. fixed income and TIPS while having minor underweight in global equity, REITs, and commodities.
- World equity markets turned sharply lower in the fourth quarter, as rising concerns of slowing global economic growth and political uncertainties fueled volatility and ignited waves of selling pressure. The global equity fund did not deviate much from this market pattern, closely following its custom benchmark's steps to net a double-digit decline this quarter, -13.2% vs. -13.3%. This steep drop also wiped out the fund's full-year gains and caused it to end 2018 on a losing note of -9.5%. Longer-term track record of the fund does still remain in good shape, as it continues perform in line with expectations by carrying market-like gains beyond the 1-year mark.
- In light of the equity selloff and risk-off rotation during Q4, the U.S. fixed income fund emerged as the Judges II's best performing major investment, generating a welcoming 1.4% of gain that virtually matched the custom Bloomberg Barclays benchmark's pace. This benchmark-tying performance also allowed the U.S. fixed income fund to maintain its long-term edge in relative terms.
- The TIPS segment lost ground for the second straight quarter, as broader inflation pressure has eased in the second half of 2018 with a string of benign CPI readings coinciding with the decline of oil prices. Within this backdrop, the JRS II TIPS portfolio recorded a minor pullback of -0.4% and mirrored the output of the Bloomberg Barclays U.S. TIPS Index.
- The JRS II REIT portfolio was not immune to the fourth quarter's challenging financial market condition, but overall speaking it fared better than the broader global equity fund with a less severe drop of -4.9%. For the full year the fund posted a total return of -4.1%. Both of these figures were modestly above the REIT custom benchmark's respective returns of -5.1% and -4.7%.
- The commodities segment bore the brunt of the growth concern-driven risk assets selloff during the last quarter of 2018, particularly notable was the collapse of crude oil prices (-38.0% by WTI, to \$45.41

per barrel). As a result, the commodities portfolio was also down for the quarter, losing -23.0% that was on par with the benchmark GSCI Commodity Total Return Index. The Q4 selloff landed both the portfolio and benchmark's 2018 full year return in the red, too, at -13.7% and -13.8% respectively.

Commodities	4.7	5.0	-0.3
Cash/Short-Term	0.0	0.0	0.0
Total LRS	100.0	100.0	0.0

Commentary – LRS

- The California Legislators' Retirement System's ("LRS, the System") higher allocation to fixed income (50% to U.S. fixed income and 16% to TIPS) effectively served as a buffer, negating a lot of the negative impact from the global equity and commodities exposures, both of which suffered double-digit rate of losses during the volatile fourth quarter. The System did still conclude the quarter with an overall loss of -3.9%, but this was a much less severe rate compared to the Judges II; this performance also measured well to the weighted policy benchmark's -4.0% return. Given LRS's conservative asset allocation and its utilization of investment grade fixed income, the long-term track record exhibits a relatively consistent pace. This is readily observed as the System's 3- and 5-year returns have both averaged at or near the 4% range, while also modestly outpacing the weighted policy benchmark.
- As of December 31, the System was overweight in U.S. fixed income and TIPS while underweight in global equity, REITs and commodities.
- World equity markets turned sharply lower in the fourth quarter, as rising concerns of slowing global economic growth and political uncertainties fueled volatility and ignited waves of selling pressure. The LRS global equity fund did not deviate much from this market pattern, closely following its custom benchmark's steps to net a double-digit decline this quarter, -13.2% vs. -13.3%. This steep drop also wiped out the fund's full-year gains and caused it to end 2018 on a losing note of -9.5%. Longer-term track record of the fund does still remain in good shape, as it continues perform in line with expectations by carrying market-like gains beyond the 1-year mark.
- In light of the equity selloff and risk-off rotation during Q4, the U.S. fixed income fund emerged as the LRS's best performing major investment, generating a welcoming 1.3% of gain that virtually matched the custom Bloomberg Barclays benchmark's pace. This benchmark-tying performance also allowed the U.S. fixed income fund to maintain its long-term edge in relative terms.
- The TIPS segment lost ground for the second straight quarter, as broader inflation pressure has eased in the second half of 2018 with a string of benign CPI readings coinciding with the decline of oil prices. Within this backdrop, the LRS TIPS portfolio recorded a minor pullback of -0.4% and mirrored the output of the Bloomberg Barclays U.S. TIPS Index.
- The LRS REIT portfolio was not immune to the fourth quarter's challenging financial market condition, but overall speaking it fared better than the broader global equity fund with a less severe drop of -4.9%. For the full year the fund posted a total return of -4.1%. Both of these figures were modestly above the REIT custom benchmark's respective returns of -5.1% and -4.7%.
- The commodities segment bore the brunt of the growth concern-driven risk assets selloff during the last quarter of 2018, particularly notable was the collapse of crude oil prices (-38.0% by WTI, to \$45.41 per barrel). As a result, the commodities portfolio was also down for the quarter, losing -22.0% that was near-par with the benchmark GSCI Commodity Total Return Index (-22.9%). The Q4 selloff landed both the portfolio and benchmark's 2018 full year return in the red, too, at -12.7% and -13.8% respectively.

Cash/Short-Term	0.0	0.0	0.0
Total LTC	100.0	100.0	0.0
Commentary – LTC

- Among the three major Affiliates programs, the Long-Term Care Program has the lowest exposure to global equities, currently at 16%. While this limited allocation was definitively a positive amid Q4's global equity pullback, part of this benefit was offset by LTC's higher REITs and commodities allocation, which both sold off during the quarter as well. In the end, the Program ended the fourth quarter on a similar note to the Legislators' Retirement System, retreating -3.8%. For the same period, the Program's own policy benchmark returned -3.7%. Over longer time horizon, the LTC has done relatively well as its track record currently sits comfortably ahead of the policy benchmark over time periods 5-year and beyond.
- The LTC's asset allocation showed that it was overweight in global equity and U.S. fixed income, while underweight in TIPS, REITs and commodities.
- World equity markets turned sharply lower in the fourth quarter, as rising concerns of slowing global economic growth and political uncertainties fueled volatility and ignited waves of selling pressure. The LTC global equity fund did not deviate much from this market pattern, closely following its custom benchmark's steps to net a double-digit decline this quarter, -13.2% vs. -13.3%. This steep drop also wiped out the fund's full-year gains and caused it to end 2018 on a losing note of -9.8%. Longer-term track record of the fund does still remain in good shape, as it continues perform in line with expectations by carrying market-like gains beyond the 1-year mark.
- In light of the equity selloff and risk-off rotation during Q4, the U.S. fixed income fund emerged as the LTC's best performing major investment, generating a welcoming 1.4% of gain that virtually matched the custom Bloomberg Barclays benchmark's pace. This benchmark-tying performance also allowed the U.S. fixed income fund to maintain its long-term edge in relative terms.
- The TIPS segment lost ground for the second straight quarter, as broader inflation pressure has eased in the second half of 2018 with a string of benign CPI readings coinciding with the decline of oil prices. Within this backdrop, the LTC TIPS portfolio recorded a minor pullback of -0.5% and mirrored the output of the Bloomberg Barclays U.S. TIPS Index.
- The LTC REIT portfolio was not immune to the fourth quarter's challenging financial market condition, but overall speaking it fared better than the broader global equity fund with a less severe drop of -4.9%. For the full year the fund posted a total return of -4.5%. Both of these figures were modestly above the REIT custom benchmark's respective returns of -5.1% and -5.5%.
- The commodities segment bore the brunt of the growth concern-driven risk assets selloff during the last quarter of 2018, particularly notable was the collapse of crude oil prices (-38.0% by WTI, to \$45.41 per barrel). As a result, the commodities portfolio was also down for the quarter, losing -23.0% that was near-par with the benchmark GSCI Commodity Total Return Index (-22.9%). The Q4 selloff landed both the portfolio and benchmark's 2018 full year return in the red, too, at -14.0% and -13.8% respectively.

⁶¹ The LTC US Fixed Income Custom Benchmark is the Bloomberg Barclays Long Liability Index. Barclays Long Liability ex TIPS ex High Yield was the benchmark between June 2007 and July 2005. Prior of that the benchmark was the Barclays Aggregate Bond Index.

California Employees' Retiree Benefit Trust

Capital Market Overview

U.S. Equity Market

The U.S. stock market, represented by the Wilshire 5000 Total Market IndexSM, was down -14.29% for the fourth quarter of 2018 and -5.27% for the year. This marks the worst quarter for U.S. equities since 2011 and the first down year since the credit crisis sell-off of 2008. The index had been down by double-digits for the year in late-December before gaining nearly 7% during the final few trading days. Concerns of an economic slowdown weighed on stock prices as did fears that additional rate increases by the Federal Reserve could weaken future prospects for economic growth. Ongoing trade negotiations between China and the U.S. continued to be a factor affecting market activity during the quarter with the eventual resolutions standing as a major unknown entering the new year.

Large capitalization stocks far outperformed small caps for the quarter as the Wilshire Large-Cap IndexSM was down -13.69% versus a loss of -19.67% for the Wilshire US Small-Cap IndexSM. The large-cap segment of the market leads small-caps for the past twelve months, as well. The Wilshire US Micro-Cap IndexSM was down -23.50% for the quarter and -15.58% for the one-year. Growth stocks trailed value, generally, during the fourth quarter but outperformed during the past twelve months.

Nearly all of the eleven major sectors were in negative territory during the fourth quarter. The only positive sector was Utilities (+0.8%) with Energy (-25.6%), Industrials (-18.2%) and Information Technology (-17.5%) down the most.

Fixed Income Market

The U.S. Treasury yield curve fell across most maturities during the quarter with the biggest decreases occurring in the intermediate to longer segment of the curve. The bellwether 10-year Treasury yield ended the quarter at 2.69%, down 37 basis points from September. The Federal Open Market Committee decided to increase its overnight rate by 25 basis points in December to a range of 2.25% to 2.50%. The committee adjusted their forecast for future rates, communicated through their "dot plot," from three rate increases in 2019 to only two. Credit spreads widened during the quarter within both the investment grade and high yield markets.

The yield curve ended 2018 with a very unusual shape – which will likely be a source of debate if it persists, largely focusing on the Fed's December rate hike. Some fear that it could be enough to slow the economy and are therefore selling shorter-term bonds, pushing rates higher. Others highlight the fact that the Fed's mandate focuses on both growth and inflation and that a 0.25% increase is not likely to stop the U.S. economy cold. While history has shown that an inverted curve often precedes a recession, the time between the events can be as much as a year. Also, the Fed makes their final decisions based on all available data and can decide to adjust their course of action.

Non-U.S. Markets

Equity markets outside of the U.S. also suffered during the fourth quarter of 2018, although they generally outperformed the U.S. equity market. For all of 2018, however, foreign equities significantly underperformed, falling by double digits. While the European Union began the year in sound condition, economically, growth declined steadily during the year while gains in unemployment stalled and industrial production reversed course. News out of Japan was grim with a report showing a serious economic contraction during the third quarter that threatens to end Japan's longest expansion since the 1980's. Emerging markets actually led global equity for the quarter but still exhibited a meaningful loss. While there were some positive signals on the U.S.-China trade front, investors will likely wait until after a scheduled meeting in January between the two countries before fully evaluating the current global trade environment.

Real Assets Markets

Real estate securities outperformed broader equities during the quarter but were still down in absolute terms. The same is true for 2018 although Real Estate maintained only a slight margin. Commodity results were down for the quarter as crude oil fell -38.0% to \$45.41 per barrel. Natural gas prices were down -2.3%, ending the quarter at \$2.94 per million BTUs. MLP returns were in negative territory for the quarter (-17.30%) and are down double-digits for the year. Finally, gold prices were up and finished at approximately \$1,281 per troy ounce, up +7.1% from last quarter.

[±] Cash balances are inclusive of employer fund contributions that are in the process of being invested into asset classes. These contributions occur daily, but tend to be higher at the end of each quarter.

Health Care Fund

Health Care Fund Periods Ended December 31, 2018

Net of Fee Fund Performance

Fund Performance Periods Ended December 31, 2018

	Market Value	Qtr	One Year	Three Year	Five Year	Ten Year
Health Care Fund	\$450.6 mil	1.7%	0.1%	2.1%	2.7%	4.2%
Barclays US Aggregate Bond		1.6	0.0	2.1	2.5	3.5

⁶³ The decline in assets in the third quarter of 2012 was due to a \$100 million withdrawal from the fund.

Supplemental Income Plans

Supplemental Income Plan Performance⁶⁴

Growth in Assets (in \$Millions)

⁶⁴ SCP experienced a steep increase in assets during the first quarter of 2015. This was due to the termination of the State Peace Officers' and Firefighters' (POFF) Defined Contribution Plan, which took place June 1, 2014. The termination required distributions of participant's money in the POFF DC Plan in accordance with state and federal law, and SCP was designated as the default plan for participants who did not make an affirmative election to take a distribution.

ARS Characteristics

				Rolling Correlations vs. Index					
Perce	entage		<u>Domestic</u>						
of po	ositive	Beta vs. S&P	MSCLAW x- Fixed Real Estat						
Mo	onths	<u>500</u>	<u>W5000</u>	<u>US</u>	<u>Benchmark</u>	<u>Benchmark</u>			
6	61%	0.0	-0.1	0.0	0.2	-0.1			

- Beta vs. S&P 500: This measures the amount of stock market risk in the portfolio. A beta of 1.0 would indicate that the portfolio's performance should closely track the stock market, while a beta higher than 1.0 implies greater-than-market risk and possibly leverage. The portfolio's beta is currently at 0.0, implying that there are no relationship between the portfolio's expected return and the stock market return, which is appropriate for this program.
 - Correlation vs. various indices: We have calculated the historical correlation between the ARS and CalPERS' other main asset classes. Over a market cycle, the ARS has shown little to no correlation to

 ⁶⁵he ARS Policy Benchmark consists of the Merrill Lynch 1-Year Treasury Note + 5% and is linked historically to its prior benchmark.
⁶⁶he "Information Ratio" calculates the amount of excess performance earned per unit of excess risk, as measured by tracking error. Higher information ratios imply a greater return per risk ventured.

⁶⁷he Sharpe Ratio or reward-to-variability ratio is a measure of the mean excess return per unit of risk in an investment strategy. The Sharpe ratio is used to characterize how well the return of an asset compensates the investor for the risk taken.

⁶⁸he Sortino Ratio is measure of a risk-adjusted return of an investment asset. It is an extension of the Sharpe Ratio. While the Sharpe ratio takes into account any volatility, in return of an asset, Sortino ratio differentiates volatility due to up and down movements. The up movements are considered desirable and not accounted in the volatility.

the public equity and real estate markets while also exhibiting very low correlation with fixed income markets.

Absolute Return Strategies Review for PERF (Continued)

Period Ended 12/31/2018

 Histogram: The ARS is designed to generate small amounts of return on a consistent basis. This chart shows the frequency of monthly performance results. A significant number of outlying monthly performance returns would indicate insufficient risk controls. We believe that the distribution of monthly returns is as expected.
