

Strategic Alignment Across California's Three Large State Purchasers: What are the Opportunities

Summary of Discussion

The three large public purchasers in California together serve approximately 42% of Californians. This combined purchasing power has the potential to accelerate coordinated delivery system change to improve access, care, and affordability for our members and for all Californians. In this session, we will hear from our public purchasing partner leaders, Peter Lee, Executive Director of Covered California and Michelle Baass, Director of the California Department of Health Care Services on their visions for health care delivery system transformation as well as opportunities for purchaser alignment. CalPERS Chief Medical Officer, Julia Logan will provide an overview of current and future opportunities for cross-purchaser alignment that will help to support our CalPERS strategic plan. The goal of the session is to update Board members about current alignment activities and to inform future CalPERS initiatives and strategies.
