# Agenda Item 6a

### **September 16, 2025**

Item Name: Annual Actuarial Valuation Terminated Agency Pool

**Program**: Actuarial Office

**Item Type**: Information

## **Executive Summary**

This agenda item presents the annual actuarial valuation report for the Terminated Agency Pool. As of June 30, 2024, the funded status of the Terminated Agency Pool is 230.5%.

The following table summarizes key results from the valuation:

Comparison of Current and Prior Year Results				
	June 30, 2023	June 30, 2024		
Present Value of Benefits	\$171,101,061	\$159,027,678		
Accrued Liability	\$171,101,061	\$159,027,678		
Market Value of Assets	\$358,832,436	\$366,613,322		
Funded Status	209.7%	230.5%		

## Strategic Plan

This item is presented as part of the regular ongoing workload of the Actuarial Office and supports the Pension Sustainability Goal of the CalPERS 2022-2027 Strategic Plan.

## **Background**

The Terminated Agency Pool (TAP) Program exists to provide benefit payments to CalPERS members who are credited with service from terminated agencies. Agencies of the TAP Program do not pay regular contributions into the fund. Instead, each plan that terminates is required to have a funded status of 100% plus a contingency load of 5% for unforeseen negative experience to enter the pool.

Employers that have a funded status at termination that exceeds 105% are provided a refund for the difference. Those with a funded status below 105% are required to make up the difference at the time of termination.

On December 2012, the Board approved an asset allocation change for the TAP Program that splits the TAP asset portfolio into two segments: the "immunized" segment and the "non-immunized" segment. The immunized segment of the portfolio consists of long-term U.S.

Treasury bonds, which are purchased to match liability cash flows and mitigate interest rate risk. The non-immunized segment is invested in the Public Employees' Retirement Fund (PERF) with an expected rate of return of 6.8%.

## **Analysis**

As of June 30, 2024, the TAP Program is funded at 230.5%. This indicates that existing assets are roughly 130% greater than the amount expected to be necessary to pay all future benefits of the members of the TAP. The funded status increased since the last valuation.

The discount rate used for the determination of the actuarial liabilities is 4.34%. This rate is the 30-year U.S. Treasury Separate Trading of Registered Interest and Principal of Securities (STRIPS) yield as of June 30, 2024. The discount rate used in the June 30, 2023 valuation was 3.75%.

## **Budget and Fiscal Impacts**

Not Applicable.

#### **Benefits and Risks**

Interest rate risk or investment volatility is typically the greatest risk that a pension plan faces for funding purposes. However, because a significant portion of the TAP is immunized, the pool is not subject to a large amount of interest rate risk. Therefore, the greatest risks to the pool are mortality risk and inflation risk, assuming no changes in current pool membership. A sensitivity analysis was performed on the TAP to evaluate the volatility of the funded status due to a change in mortality rates and inflation rates over the long-term. The following table summarizes the analysis:

Sensitivity of the Funded Status to a Change in Mortality Rates					
As of June 30, 2024	<b>Current Mortality</b>	-10% Mortality	+10% Mortality		
	Rates	Rates	Rates		
Funded Ratio	230.5%	223.8%	237.0%		
Accrued Liability Impact		\$4.8 million	(\$4.3) million		

A 10% increase (decrease) to the assumed mortality rates over the long-term would result in approximately a 6% increase (decrease) to the funded ratio.

Sensitivity of the Funded Status to a Change in Inflation Rates				
As of June 30, 2024	Current Inflation Rate 2.13%	1.13% Inflation Rate	3.13% Inflation Rate	
Funded Ratio	230.5%	254.0%	221.7%	
Accrued Liability Impact		(\$14.7) million	\$6.4 million	

A decrease of 1% in the inflation rate assumption (2.13% to 1.13%) reduces the Accrued Liability by 9.2%. However, a 1% increase in the inflation rate (2.13% to 3.13%) increases the Accrued Liability by 4.0%. Unlike the mortality sensitivity analysis above, the impact of the inflation rate sensitivity is not symmetrical. The reason for this is most plans in the TAP have a 2% COLA provision, which limits annual increases to 2%.

#### **Funded Ratio Dilution Risk**

Over the last several years, the funded status of the TAP has varied between 250% to 175%. The current funded status is 230.5% and has increased compared to last years funded status. The absolute dollar amount of the surplus has increased since the last valuation from \$188 million to \$208 million. The funded status has increased and the TAP's accrued liabilities have decreased due to the change in discount rate, while the TAP assets have remained fairly stable.

The termination of a single large plan in the future could immediately reduce the funded status significantly. For example, as of June 30, 2024 at a funded status of 230.5%, a termination of a \$50 million liability plan would decrease the funded status of the TAP by about 30%.

While the continued termination of plans in the future is expected to gradually reduce the funded status of the TAP, it is not expected to result in a funded status of less than 100%. However, a combination of the addition of future terminated plans and unfavorable experience such as longer life spans, could potentially reduce the funded status to less than 100%. This risk is mitigated by higher investment returns expected from the non-immunized segment of the TAP assets.

#### **Inflation Risk**

The U.S. Treasury securities purchased for the TAP portfolio are expected to cover projected benefit payments growing over a range of conservative inflation forecasts ranging from 2% to 6%. Even though current inflation rates are relatively high, it is unlikely for this to persist in the future for an extended period.
