Actuarial Certification

February 2023

To the best of our knowledge, this report is complete and accurate and contains sufficient information to disclose, fully and fairly, the actuarial funded condition of the Judges' Retirement System. This valuation and related validation work was performed by the CalPERS Actuarial Office and is based on the member and financial data as of June 30, 2022 provided by the various CalPERS databases and the benefits under the Judges' Retirement Law as of the date this report was produced.

It is our opinion that the valuation has been performed in accordance with generally accepted actuarial principles, in accordance with standards of practice prescribed by the Actuarial Standards Board, and that the assumptions and methods, as prescribed by the CalPERS Board of Administration, are internally consistent and reasonable for this plan.

The undersigned are actuaries for CalPERS, who satisfies the Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States with regard to pensions.

May Shuang Yu, ASA, MAAA
Senior Actuary, CalPERS

Tony Cuny, ASA, MAAA

Highlights and Executive Summary

Introduction

This is the actuarial valuation report as of June 30, 2022 for the Judges' Retirement System (System). The actuarial valuation is used to recommend the fiscal year 2023-24 employer contributions. The System provides retirement and ancillary benefits to judges elected or appointed prior to November 9, 1994. The employer and member contribution rates for the plan are set by State statute and are each equal to 8% of payroll. The State currently funds the System using a pay-as-you-go approach since the 8% of payroll contributions made by both the State and members are ***not adequate to meet the System's current benefit payouts***.

Purpose of Report

This report documents the results of the actuarial valuation prepared by the CalPERS Actuarial Office using data as of June 30, 2022. The purpose of the valuation is to:

- Set forth the assets and accrued liabilities of the System as of June 30, 2022
- Provide expected benefit payouts and funding alternatives
- Provide actuarial information as of June 30, 2022, to the CalPERS Board of Administration (board) and other interested parties.

The pension funding information presented in this report should not be used in financial reports subject to Governmental Accounting Standards Board (GASB) Statement No. 68. A separate accounting valuation report for such purposes is available from CalPERS and details for ordering are available on the CalPERS website (www.calpers.ca.gov). The measurements shown in this actuarial valuation may not be applicable for other purposes.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions, changes in economic or demographic assumptions, changes in actuarial policies, and changes in plan provisions or applicable law.

Assessment and Disclosure of Risk

This report includes the following risk disclosures consistent with the recommendations of Actuarial Standards of Practice No. 51 and recommended by the California Actuarial Advisory Panel (CAAP) in the Model Disclosure Elements document that would be applicable to a pay-as-you-go plan:

- A "Sensitivity Analysis," showing the impact on current valuation results using alternative discount rates of 2% and 4% and inflation rates of 1.3% and 3.3%.
- A "Sensitivity Analysis," showing the impact on current valuation results assuming rates of mortality are 10% lower or 10% higher than our current mortality assumptions adopted in 2017. This type of analysis highlights the impact on the plan of improving or worsening mortality over the long-term.

Highlights and Executive Summary

Employer Contribution

The State contributes to the plan on a pay-as-you-go basis. In other words, member contributions plus employer contributions are designed to cover only benefit payments and expenses each year, with nothing left over for pre-funding. A pay-as-you-go approach is easy to understand. However, from an accounting viewpoint, pensions in the aggregate are considered a form of deferred wages and should generally be charged over the period of employment. Also, from the member's point of view, it is generally not satisfactory that their future benefit payments are dependent upon the continued willingness and ability of the employer to cover the benefit payments each year.

Pay-As-You-Go Employer Contributions

A comparison of the pay-as-you-go costs reduced by expected member contributions for the prior and current valuation is shown below.

	Fiscal Year 2022-23	Fiscal Year 2023-24
Estimated Employer Pay-as-You-Go Cost (PAYG)	\$198,557,517	\$204,705,398

The average expected remaining service for current actives is approximately 5.8 years. Some believe that pensions should be funded over a period similar to the remaining service life. CalPERS recognizes that making contributions equal to the entire Unfunded Actuarial Liability (UAL) within 6 years is not realistic at this time. However, the lack of any accumulation of assets remains a serious concern. Advance funding of the System's benefits enables the pension assets to grow with investment earnings and would reduce future contribution requirements needed on a pay-as-you-go basis. It is recommended that the State consider some form of advanced funding.

Prefunded Employer Contributions

In the following table, we have shown three possible funding amounts, equal to the Normal Cost plus a 15-year, a 10-year and a 5-year level dollar amortization of the UAL, in addition to the PAYG amount. We recommend a 10-year or shorter amortization, since most, if not all, active members would be expected to retire within that time and the duration of benefit payments is 9.9. We have also shown the expected total amount of payments expected to be made over the life of the plan under each scenario. This demonstrates the amount of savings that can be realized when assets are invested.

Prefunded Employer Contributions

	Pay-as-You-Go	Fiscal Year 2023-24		
		Funding, 15-Year Amortization	Funding, 10-Year Amortization	Funding, 5-Year Amortization
Total Normal Cost	N/A	\$11,754,513	\$11,754,513	\$11,754,513
Less Estimated Employee Contributions	N/A	(1,606,631)	(1,606,631)	(1,606,631)
Unfunded Accrued Liability Payment	N/A	218,409,260	305,661,614	569,328,006
Total Annual	\$204,705,398	\$228,557,142	\$315,809,496	\$579,475,889
Expected Total Payout over the Life of the Plan (Employer and Employee costs including the estimated PAYG costs for fiscal year 2022-23)	\$3,954,938,724	\$3,554,301,287	\$3,334,778,529	\$3,124,802,426

CalPERS is ready to work with the Administration in establishing an acceptable advance-funding basis that satisfies both the recommendation for advanced funding and current fiscal limitations. The funding schedules above are based on a 3% discount rate. This 3% discount rate used in the valuation represents an expected return on a fixed income portfolio consistent with the capital market assumptions used by CalPERS in its most recent Asset Liability Management review.

Highlights and Executive Summary

Plan's Funded Status

The table below summarizes the funded status of the Judges' Retirement System as of June 30, 2022, and the prior valuation year.

	June 30, 2021	June 30, 2022
1) Present Value of Projected Benefits	\$2,889,125,579	\$2,885,084,886
2) Entry Age Normal Accrued Liability	2,803,229,924	2,805,415,585
3) Market Value of Assets (MVA)	65,882,450	52,709,366
4) Unfunded Accrued Liability [(2) - (3)]	\$2,737,347,474	\$2,752,706,219
5) Funded Ratio [(3) / (2)]	2.4%	1.9%

The Unfunded Accrued Liability and funded ratio are assessments of the need for future employer contributions based on the actuarial cost method used to fund the plan. The Unfunded Accrued Liability, if positive, is the present value of future employer contributions for service that has already been earned and is in addition to future normal cost contributions for active members. The funded ratio, on the other hand, is a relative measure of funded status that allows for comparison between plans of different sizes. The funded ratio is not appropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the employer's benefit obligations.

Changes Since the Prior Year's Valuation

Actuarial Methods and Assumptions

There are no changes to actuarial methods or assumptions for the June 30, 2022 actuarial valuation.

A complete description of the actuarial methods and assumptions used in the June 30, 2022 valuation may be found in Appendix A of this report.

Plan Provisions

There were no plan changes since the prior valuation. A description of the principal plan provisions may be found in Appendix B of this report.

Subsequent Events

During the time period between the valuation date and the publication of this report, inflation has been significantly higher than the expected inflation of 2.3% per annum. Since inflation influences cost of living increases for retirees and beneficiaries and active member pay increases, higher inflation is likely to put at least some upward pressure on contribution requirements and downward pressure on the funded status in the June 30, 2023 valuation. The actual impact of higher inflation on future valuation results will depend on, among other things, how long higher inflation persists. At this time, we continue to believe the long-term inflation assumption of 2.3% is appropriate.

Comparison of Current and Prior Year Results

Shown below are the comparisons of key valuation results for the current valuation date compared to corresponding values from the prior valuation date.

	June 30, 2021	June 30, 2022
1) Members Included in the Valuation		
a) Active Members	110	99
b) Deferred Vested Separated Members & QDRO's	2	2
c) Receiving Payments	1,697	1,647
d) Total Members Included in the Valuation	1,809	1,748
2) Payroll		
a) Covered Annual Payroll	\$24,752,164	\$23,354,332
b) Projected Covered Annual Payroll	20,916,289	20,082,887
c) Average Covered Annual Payroll [(2a) / (1a)]	225,020	235,902
3) Age and Service for Actives		
a) Average Attained Age for Actives	73.94	74.59
b) Average Service for Actives	32.70	33.77
c) Average Future Service for Actives	5.88	5.76
4) Present Value of Benefits at Valuation Date		
a) Active Members	\$254,584,067	\$235,154,877
b) Deferred Vested Separated Members & QDRO's	4,634,241	4,887,123
c) Receiving Benefits	2,629,907,271	2,645,042,886
d) Total Present Value of Benefits at Valuation Date	\$2,889,125,579	\$2,885,084,886
5) Present Value of Future Normal Costs at Valuation Date		
a) Member Contributions	\$11,718,066	\$10,833,880
b) Employer Normal Costs	74,177,589	68,835,421
6) Unfunded Accrued Actuarial Liability		
a) Accrued Actuarial Liability		
i. Active Members	\$168,688,412	\$155,485,576
ii. Deferred Vested Separated Members & QDRO's	4,634,241	4,887,123
iii. Receiving Benefits	2,629,907,271	2,645,042,886
iv. Total Accrued Actuarial Liability	\$2,803,229,924	\$2,805,415,585
b) Assets (Market Value)	65,882,450	52,709,366
c) Unfunded Actuarial Liability [(6 a iv) – (6b)]	2,737,347,474	2,752,706,219
d) Funded Ratio [(6b) / (6 a iv)]	2.4%	1.9%
7) Normal Cost	\$12,221,387	\$11,754,513
8) Employer Contributions		
a) Recommended 10-Year Funding		
i. Normal Cost	\$12,221,387	\$11,754,513
ii. Estimated Employee Contributions	1,673,303	1,606,631
iii. Payment on Unfunded Liability	302,570,316	305,661,614
iv. Total Recommended Employer Contribution [(8 a i) – (8 a ii) + (8 a iii)]	\$313,118,401	\$315,809,496
b) Estimated Pay-as-You-Go Costs (PAYG)		
i. Estimated Benefit Payments	\$200,230,820	\$206,312,029
ii. Estimated Employee Contributions	1,673,303	1,606,631
iii. Estimated Employer Contributions [(8 b i) – (8 b ii)]	\$198,557,517	\$204,705,398

Liabilities and Required Employer Contributions

(Gain)/Loss Analysis

To calculate the cost requirements of the plan, assumptions are made about future events that affect the amount and timing of benefits to be paid and assets to be accumulated. Each year, actual experience is compared to the expected experience based on the actuarial assumptions. This results in actuarial gains or losses, as shown below.

1) Total (Gain)/Loss for the Year	Amount
a)Unfunded Accrued Liability (UAL) as of 6/30/2021	\$2,737,347,474
b)Expected Pay as You Go Excluding Normal Cost	186,336,130
c)Interest through 6/30/19 $[0.03 \times 1a - ((1.03)^{1/2} - 1) \times 1b]$	68,403,533
d)Expected UAL Before All Other Changes $[1a - 1b + 1c]$	2,619,414,877
e)Change Due to Revised Actuarial Methods	0
f)Change Due to New Actuarial Assumptions	0
g)Expected UAL After All Changes $[1d + 1e + 1f]$	2,619,414,877
h)Actual Unfunded Accrued Liability as of 6/30/2022	2,752,706,219
i) Total (Gain)/Loss for FY 2021-22 $[1h - 1g]$	\$133,291,342
2) Contribution (Gain)/Loss for the Year	Amount
a)Expected Contribution (Employer and Employee)	\$198,557,517
b)Interest on Expected Contributions $[((1.03)^{1/2} - 1) \times 2a]$	2,956,354
c)Actual Contribution	196,915,775
d)Interest on Actual Contributions $[((1.03)^{1/2} - 1) \times 2c]$	2,931,910
e)Contribution (Gain)/Loss $[(2a + 2b) - (2c + 2d)]$	\$1,666,187
3) Asset (Gain)/Loss for the Year	Amount
a)Market Value of Assets as of 6/30/2021	\$65,882,450
b)Contributions Received	196,915,775
c)Benefits and Refunds Paid	(210,491,487)
d)Transfers, SCP, and Miscellaneous Adjustments	2,305,101
e)Expected Interest $[0.03 \times 3a + ((1.03)^{1/2} - 1) \times (3b + 3c + 3d)]$	1,808,664
f)Expected Assets as of 6/30/2022 $[3a + 3b + 3c + 3d + 3e]$	56,420,503
g)Actual Market Value of Assets as of 6/30/2022	52,709,366
h)Asset (Gain)/Loss $[3f - 3g]$	\$3,711,136
4) Liability (Gain)/Loss for the Year	Amount
a)Total (Gain)/Loss (1i)	\$133,291,342
b)Contribution (Gain)/Loss (2e)	1,666,187
c)Asset (Gain)/Loss (3h)	3,711,136
d)Liability (Gain)/Loss $[4a - 4b - 4c]$	\$127,914,019

Liabilities and Required Employer Contributions

Funding History

The Funding History below shows the recent history of the Actuarial Accrued Liability, the Market Value of Assets, Funded Ratio, the Annual Covered Payroll and the Pay-As-You-Go (PAYG) Cost.

Valuation Date	Entry Age Normal Accrued Liability	Market Value of Assets (MVA)	Unfunded Accrued Liability	Funded Ratio (MVA)	Annual Covered Payroll	PAYG Cost
6/30/22	\$2,805,415,585	\$52,709,366	\$2,752,706,219	1.9%	\$23,354,332	\$204,705,398
6/30/21	2,803,229,924	65,882,450	2,737,347,474	2.4%	24,752,164	198,557,517
6/30/20	3,105,001,091	48,020,033	3,056,981,058	1.5%	29,137,115	210,757,479
6/30/19	3,173,229,040	14,080,882	3,159,148,158	0.4%	31,511,394	209,344,866
6/30/18	3,320,530,020	44,491,530	3,276,038,490	1.3%	35,335,347	210,045,751
6/30/17	3,315,731,052	48,274,516	3,267,456,536	1.5%	38,330,347	207,313,847
6/30/16	3,428,743,441	39,793,891	3,388,949,550	1.2%	42,429,926	208,334,913
6/30/15	3,322,609,989	41,177,519	3,281,432,470	1.2%	44,284,467	227,341,695
6/30/14	3,414,779,730	57,198,659	3,357,581,071	1.7%	52,335,325	225,157,030
6/30/13	3,383,309,964	53,819,947	3,329,490,017	1.6%	60,593,543	217,464,586

Projections of Contributions & Payouts

13 10-Year Projection of Contributions and Benefits

13 Projected Benefit Payouts

Projections of Contributions & Payouts

10-Year Projection of Contributions and Benefits

Shown below is a 10-year projection of expected State and member statutory contributions and expected benefit payouts.

Fiscal Years Beginning July 1	State Statutory Contributions ¹	Member Statutory Contributions ¹	Future Benefits Payouts
2023	\$1,606,631	\$1,606,631	\$206,312,029
2024	1,430,098	1,430,098	204,934,025
2025	1,266,933	1,266,933	203,056,668
2026	1,112,308	1,112,308	200,718,700
2027	949,730	949,730	198,139,061
2028	799,464	799,464	194,056,391
2029	682,231	682,231	189,660,732
2030	577,452	577,452	184,588,299
2031	486,844	486,844	178,739,169
2032	407,918	407,918	172,543,177

(1) Statutory State contributions and statutory member contributions both equal eight percent (8%) of pay.

Projected Benefit Payouts

The graph below shows a projection of future annual benefit payouts from the System. Total projected benefit payments over the remaining life of the plan are \$3.95 billion with projected annual benefit payments declining each year.

Risk Analysis

- 15 Future Investment Return Scenarios
- 15 Discount Rate Sensitivity
- 16 Mortality Rate Sensitivity
- 16 Plan Maturity Measures

Future Investment Return Scenarios

Analysis was not performed to determine the effects of various future investment returns on required employer contributions for this plan because the results of such analysis would not have a material impact on the funding of this plan. This is primarily due to the lack of prefunding, which results in a relatively low level of assets.

Discount Rate Sensitivity

The discount rate assumption is calculated as the sum of the assumed real rate of return and the assumed annual price inflation, currently 0.70% and 2.30%, respectively. Changing either the price inflation assumption or the real rate of return assumption will change the discount rate. The sensitivity of the valuation results to the discount rate assumption depends on which component of the discount rate is changed. Shown below are various valuation results as of June 30, 2022 assuming alternate discount rates by changing the two components independently. Results are shown using the current discount rate of 3.0% as well as alternate discount rates of 2.0% and 4.0%. The rates of 2.0% and 4.0% were selected since they illustrate the impact of a 1.0% increase or decrease to the 3.0% assumption. This type of analysis gives the reader a sense of the long-term risk to the FY 2023-24 employer contribution rates.

Sensitivity to the Real Rate of Return Assumption

As of June 30, 2022	1% Lower Real Return Rate	Current Real Return Rate	1% Higher Real Return Rate
Discount Rate	2.0%	3.0%	4.0%
Inflation	2.3%	2.3%	2.3%
Real Rate of Return	(0.3%)	0.7%	1.7%
a) Total Normal Cost	74.83%	58.53%	45.93%
b) Accrued Liability	\$3,074,827,069	\$2,805,415,585	\$2,573,069,524
c) Market Value of Assets	52,709,366	52,709,366	52,709,366
d) Unfunded Liability (Surplus) [(b)-(c)]	3,022,117,703	2,752,706,219	2,520,360,158
e) Funded Status	1.7%	1.9%	2.0%

(1) The -1% Inflation Rate results in the table below is a more realistic scenario than this combination of assumptions, which results in a negative real rate of return.

Sensitivity to the Price Inflation Assumption

As of June 30, 2022	1% Lower Inflation Rate	Current Inflation Rate	1% Higher Inflation Rate
Discount Rate	2.0%	3.0%	4.0%
Inflation	1.3%	2.3%	3.3%
Real Rate of Return	0.7%	0.7%	0.7%
a) Total Normal Cost	58.92%	58.53%	58.15%
b) Accrued Liability	\$2,819,735,426	\$2,805,415,585	\$2,791,267,168
c) Market Value of Assets	52,709,366	52,709,366	52,709,366
d) Unfunded Liability (Surplus) [(b)-(c)]	2,767,026,060	2,752,706,219	2,738,557,802
e) Funded Status	1.9%	1.9%	1.9%

Mortality Rate Sensitivity

The following looks at the change in the June 30, 2022 plan costs and funded ratio under two different longevity scenarios, namely assuming rates of mortality are 10% lower or 10% higher than our current mortality assumptions. This type of analysis highlights the impact on the plan of improving or worsening mortality over the long-term.

As of June 30, 2022	10% Lower Mortality Rates	Current Mortality	10% Higher Mortality Rates
a) Total Normal Cost	60.50%	58.53%	56.78%
b) Accrued Liability	\$2,943,037,417	\$2,805,415,585	\$2,684,422,912
c) Market Value of Assets	52,709,366	52,709,366	52,709,366
d) Unfunded Liability (Surplus) [(b)-(c)]	2,890,328,051	2,752,706,219	2,631,713,546
e) Funded Status	1.8%	1.9%	2.0%

Plan Maturity Measures

As pension plans mature they become much more sensitive to risks than plans that are less mature. Understanding plan maturity and how it affects the ability of a pension plan to tolerate risk is important in understanding how the plan is impacted by investment return volatility, other economic variables and changes in longevity or other demographic assumptions.

The Judges' Retirement plan closed to new entrants in 1994 and is a mature pension plan. For a plan that is closed to new entrants and does not prefund the pension benefits, plan maturity measures do not yield results that are very meaningful. For example, eventually there will be no payroll associated with this plan, so measuring contribution volatility with relation to payroll does not provide information consistent with plans that are open to new entrants. Additionally, eventually there will be no actives in this plan, so measuring the ratio of actives to retirees or retired to total accrued liability won't provide results that are consistent with plans open to new entrants. For these reasons, plan maturity measures have been omitted from this report.

C-1 Appendix C – Participant Data

D-1 Appendix D – Glossary

Appendix A – Actuarial Methods and Assumptions

Actuarial Data

As stated in the Actuarial Certification, the data, which serves as the basis of this valuation, has been obtained from the various CalPERS databases. We have reviewed the valuation data and believe that it is reasonable and appropriate in aggregate.

Actuarial Cost Method

The actuarial cost method used to determine the optional funding schedules is the Entry Age Normal actuarial cost method. Under this method, projected benefits are determined for all members and the associated liabilities are spread in a manner that produces level annual cost as a percent of pay in each year from the age of hire (entry age) to the assumed retirement age. The cost allocated to the current fiscal year is called the normal cost.

The actuarial accrued liability for active members is then calculated as the portion of the total cost of the plan allocated to prior years. The actuarial accrued liability for members currently receiving benefits and for members entitled to deferred benefits, is equal to the present value of the benefits expected to be paid. No normal costs are applicable for these participants.

CalPERS uses an in-house proprietary actuarial model for calculating plan costs. We believe this model is fit for its intended purpose and meets all applicable Actuarial Standards of Practice. Furthermore, the actuarial results of our model are independently confirmed periodically by outside auditing actuaries. The actuarial assumptions used are internally consistent and the generated results are reasonable.

The following table provides a brief history of the actuarial cost method.

Valuation Year June 30	Funding Method
2010 to Current	Entry Age Normal
1998 to 2009	Aggregate

Amortization Period

No formal amortization of the unfunded liability is currently in use since contributions are being made on a pay-as-you-go basis. However, we have included a recommended contribution using an amortization period of 10 years.

Asset Valuation Method

The Actuarial Value of Assets is set equal to the market value of assets. Asset values include accounts receivable.

Actuarial Assumptions

The actuarial assumptions used in the actuarial valuation are shown below.

The demographic assumptions used in the valuation are not expected to produce significant experience gains or losses for the plan. Service retirement and mortality assumptions were changed in this valuation based on an experience study review. The actuary has concluded that the adoption of these assumptions is reasonable for valuation purposes and all assumptions represent an estimate of future experience. More information on the mortality assumption is available in the mortality assumption section of this appendix.

The assumptions for inflation, individual salary increase, and overall payroll growth are based on the 2021 experience study performed by CalPERS staff based on the Public Employees' Retirement Fund (PERF) and adopted by the CalPERS Board of Administration in November 2021. The discount rate is primarily based on capital market assumptions provided by external investment consultants and CalPERS investment staff in March 2022. The discount rate (investment return assumption) for this valuation is 3.0% and is consistent with the expected 10-year return of a fixed income portfolio from the most recently approved Asset Liability Management process.

Appendix A - Actuarial Methods and Assumptions

Economic Assumptions

Investment Return: 3.00% per annum, compounded annually.

Discount Rate: 3.00% per annum, compounded annually.

Salary Increases: 2.80% per annum, compounded annually.

Inflation: 2.30% per annum, compounded annually.

Cost-of-Living Adjustment: Benefits are fully adjusted for increases in wages for the active judges of the same court from which the member retired. Therefore, we assume that benefits will increase by 2.80% per annum compounded annually.

Extended Service Incentive Program (ESIP) Interest Crediting Rate: Based on the rate for 30-year U.S. Treasuries, or their equivalent, for the month of June of the valuation year. This rate for June 2022 equals 2.16% (a change from 1.49% as of June 2021).

Investment Return (Interest)

3.00% compounded per year, net of expenses.

The following table provides a brief history of the Investment Return Assumption.

Time Frame	Investment Return Assumption
7/1/2017– Current	3.00%
7/1/2016 – 6/30/2017	3.25%
7/1/2011 – 6/30/2016	4.25%
7/1/2010 – 6/30/2011	4.50%
7/1/2003 – 6/30/2010	7.00%
7/1/1998 – 6/30/2003	7.50%

Individual Salary Increases

2.80% compounded per year.

Inflation

2.30% compounded per year. The current inflation assumption is based on the most recent CalPERS Experience Study adopted by the CalPERS Board in November 2021. The following table provides a brief history of the Inflation Return Assumption.

Time Frame	Inflation Assumption
7/1/2021 – Current	2.30%
7/1/2017 – 6/30/2020	2.50%
7/1/2011 – 6/30/2017	2.75%
7/1/2003 – 6/30/2010	3.00%
7/1/1998 – 7/1/2003	3.50%

Appendix A - Actuarial Methods and Assumptions

Demographic Assumptions

The following decrements apply to all members.

Probability of Termination and Disability

No pre-retirement termination or disability rates were assumed.

Service Retirement

The table below illustrates the new assumptions used in the valuation to determine the probability of a judge retiring out of the System.

Age	Rate
60	0.3
61-64	0.1
65-67	0.2
68-79	0.1
80 - 89	0.2
> 89	1.0

Pre-Retirement and Post-Retirement Mortality

The mortality assumptions are based on mortality rates resulting from the most recent CalPERS Experience Study adopted by the CalPERS Board in November 2021. For purposes of the mortality rates, the rates incorporate Generational Mortality to capture on-going mortality improvement using 80% of Scale MP 2020 published by the Society of Actuaries. Generational mortality explicitly assumes that members born more recently will live longer than the members born before them thereby capturing the mortality improvement seen in the past and expected continued improvement. Post-retirement base rates were determined by weighting experience by benefits. Pre-retirement rates are based on headcount weighting. For more details, please refer to the 2021 experience study report that can be found on the CalPERS website. Rates vary by age and gender are shown in the tables below. These tables only contain a sample of the 2017 base table rates for illustrative purposes.

Pre-Retirement Mortality Rates

Attained Age	Male	Female
35	0.00058	0.00029
40	0.00075	0.00039
45	0.00093	0.00054
50	0.00134	0.00081
55	0.00198	0.00123
60	0.00287	0.00179
65	0.00403	0.00250
70	0.00594	0.00404
75	0.00933	0.00688
80	0.01515	0.01149

- The pre-retirement mortality rates above are for 2017 and are projected generationally for future years using 80% of the Society of Actuaries' Scale MP-2020.

Appendix A - Actuarial Methods and Assumptions

Demographic Assumptions (continued)

Post-Retirement Mortality Rates

Attained Age	Standard		Disability	
	Male	Female	Male	Female
35	0.00058	0.00029	0.00644	0.00504
40	0.00075	0.00039	0.00807	0.00730
45	0.00093	0.00054	0.01114	0.01019
50	0.00267	0.00199	0.01701	0.01439
55	0.00390	0.00325	0.02210	0.01734
60	0.00578	0.00455	0.02708	0.01962
65	0.00857	0.00612	0.03334	0.02276
70	0.01333	0.00996	0.04001	0.02910
75	0.02391	0.01783	0.05376	0.04160
80	0.04371	0.03403	0.07936	0.06111
85	0.08274	0.06166	0.11561	0.09385
90	0.14539	0.11086	0.16608	0.14396
95	0.24664	0.20364	0.24664	0.20364
100	0.36198	0.31582	0.36198	0.31582
105	0.52229	0.44679	0.52229	0.44679
110	1.00000	1.00000	1.00000	1.00000

- The post-retirement mortality rates above are for 2017 and are projected generationally for future years using 80% of the Society of Actuaries' Scale MP-2020.

Marital Status

90% of non-retired members are assumed to be married.

Age of Spouse

Female spouses are assumed to be four years younger than male spouses. For retired members receiving some form of joint and survivor annuity, the spouse's actual date of birth was used in the valuation if such information was furnished. Otherwise, female spouses were assumed to be four years younger than their husbands.

Form of Payment

For retired members for whom no optional form of payment was elected, the assumed form of payment was:

1. 50% joint and survivor if beneficiary information was provided, or
2. A life annuity if no beneficiary information was provided.

Internal Revenue Code Section 415

The limitations on benefits imposed by Internal Revenue Code Section 415 were taken into account in this valuation.

Internal Revenue Code Section 401(a)(17)

The limitations on compensation imposed by Internal Revenue Code Section 401(a) (17) were taken into account in this valuation.

Appendix B – Principal Plan Provisions

Eligibility of Membership

All Supreme Court, District Court of Appeal, Superior Court, and Municipal Court Judges and Justices were immediately eligible for membership, if elected or appointed before November 9, 1994.

Membership Contributions

8% of pay. Withdrawal of contributions results in forfeiture of all other benefits.

Service Retirement

Eligibility

To qualify for a Service Retirement, you must be at least age 60. The table below illustrates the percent of active judicial salary that the unmodified allowance is based upon given age and years of service.

Retirement Age	Minimum Required Years of Service	Percent of Active Judicial Salary
60+	20	75%
66	18	65%
67	16	65%
68	14	65%
69	12	65%
70+	10	65%

* At least 5 years of service must immediately precede retirement.

Benefit

Members retiring after age 60 with at least 20 years of service receive 75% of pay of the last judicial office held. With less than 20 years of service, the benefit percentage is 65%.

Form of Payment

50% of the retirement allowance will automatically be continued to the spouse upon the death of the retiree, without a reduction in the retiree's allowance. For post-January 1, 1980 judges, there is a one-year marriage requirement at benefit commencement. The remaining 50%, often referred to as the option portion, is paid to the retiree as an annuity for as long as he or she is alive. The retiree may choose to provide for some, or all, of the option portion to be paid to any designated beneficiary after the retiree's death, paid for by a reduction to the option portion of the allowance.

Termination Benefit

Eligibility

Completion of five years of service.

Benefit

3.75% of pay of last judicial office held had he or she remained continuously in service as a judge of a court of record multiplied by years of service to a maximum of 20 years. Benefit percentage is reduced by 0.25% for each year of service less than 12 years. Benefit begins at the earliest age that member would have been eligible for service retirement had he remained in service; and, the member is at least age 63, or age 60 with 20 years of service.

Appendix B - Principal Plan Provisions

Termination Benefit (continued)

Minimum benefit for pre-January 1, 1974 judges: 5% of pay of last judicial office held multiplied by years of service, to a maximum of 8 years. Benefit is payable at age 65.

Form of Payment: 50% contingent annuity with spouse as contingent annuitant. Minimum benefit is paid as life annuity only.

Disability Retirement

Eligibility

Four years of service (no service requirement is necessary for a work-related disability), two years of service for pre-January 1, 1989 judges. No service requirement for pre-January 1, 1980 judges.

Benefit

With 20 years of service, 75% of pay of last judicial office held, payable immediately. With less than 20 years of service, the benefit is 65% of pay.

Pre-Retirement Death Benefits

Spouses Benefit

25% of pay of last judicial office held, payable for spouse's lifetime if not eligible for retirement. If a member dies after being eligible to retire, the surviving spouse will receive a monthly allowance equal to 50% of the monthly allowance the member would have received, had he/she retired, for life.

Contributory Benefit

After 10 years of service, spouse or minor child receives 1.625% of pay of last judicial office held multiplied by years of service, to a maximum of 20 years. Spouse's benefit is payable for life. Child's benefit ceases at age 18, or at age 22 if a full-time student. Requires \$2 monthly contribution.

Benefit with No Spouse or Children

Refund of accumulated member contributions plus one month's pay multiplied by years of service, to a maximum of 6 years.

Post Retirement Adjustments

The retirement allowances of retired judges, beneficiaries and individuals receiving benefits under domestic relation orders will increase proportionately according to increases in judicial salary increases for the judicial office last held by the member.

Appendix B - Principal Plan Provisions

Extended Service Incentive Program (ESIP)

Eligibility

An active member shall automatically participate in the program if he/she has 20 or more years of creditable service and has attained the age of 60 or more on or after January 1, 2001.

Vesting

36 months of creditable service after the later of January 1, 2001 or the date the judge first becomes eligible to participate in the program. However, the 36 months of creditable service requirement is waived in the event of the member's death, disability, or because he/she was unsuccessful in his/her efforts to be reelected or retained in office.

Benefit

For the first 60 months of participation in the program, 20% of the judge's monthly salaries and 8% of the judge's monthly salaries for the 61st to the 120th months of participation plus interest based on market yield on 30-year constant maturity U.S. Treasury Bonds shall be credited to the judge. The benefit shall be paid in the form of a single, lump sum payment.

Appendix C – Participant Data

Summary of Valuation Data

The table below illustrates counts of records processed by this valuation and the previous year valuation.

	June 30, 2021	June 30, 2022
1) Active Members		
a) Counts	110	99
b) Average Attained Age	73.94	74.59
c) Average Entry Age to Rate Plan	39.54	39.09
d) Average Years of Service	32.70	33.77
e) Average Annual Covered Pay	\$225,020	\$235,902
f) Annual Covered Payroll	24,752,164	23,354,332
g) Projected Annual Payroll	20,916,289	20,082,887
h) Present Value of Future Payroll	146,475,813	135,423,493
2) Transferred and Vested Termination Members and QDRO's		
a) Counts	2	2
3) Receiving Payments		
a) Counts	1,697	1,647
b) Average Attained Age	79.84	80.28
c) Average Annual Benefits	117,178	126,700
4) Active to Retired Ratio [(1a) / (3)]	0.06	0.06

Reconciliation of Participants

The table below illustrates a reconciliation of the participant data over the course of the valuation year. It identifies numerically who entered the plan, who left the plan and who remained in the plan in the same status as on the previous valuation date or who moved to a new status over the course of the year.

Reconciliation of Participants for the Fiscal Year Ending June 30, 2022.

	Actives Judges	Vested Separated Judges	Retired Judges	Beneficiaries	QDRO ¹ Receiving Benefits	QDRO ¹ Not Receiving Benefits	Total Participants
As of June 30, 2021	110	1	1,087	535	75	1	1,809

(1) Total does not include ESIP benefit payments.

Appendix D – Glossary

Accrued Liability (*Actuarial Accrued Liability*)

The portion of the Present Value of Benefits allocated to prior years. Based on CalPERS funding policies, the accrued liability is the target level of assets on any valuation date.

Actuarial Assumptions

Assumptions made about certain events that will affect pension costs. Assumptions generally can be broken down into two categories: demographic and economic. Demographic assumptions include such things as mortality, disability and retirement rates. Economic assumptions include discount rate, salary growth, and inflation.

Actuarial Methods

Procedures employed by actuaries to achieve certain funding goals of a pension plan. Actuarial methods include an actuarial cost method, an amortization policy, and an asset valuation method.

Actuarial Valuation

The determination, as of a valuation date of the Normal Cost, Accrued Liability, and related actuarial present values for a pension plan. These valuations are performed annually or when an employer is contemplating a change to their plan provisions.

Amortization Period

The number of years required to pay off an Amortization Base.

Discount Rate

This is the rate used to discount the expected future benefit payments to the valuation date to determine the Projected Value of Benefits. The discount rate is based on the assumed long-term rate of return on plan assets, net of investment and administrative expenses. This rate is called the “actuarial interest rate” in Section 20014 of the California Public Employees’ Retirement Law.

Entry Age

The earliest age at which a plan member begins to accrue benefits under a defined benefit pension plan. In most cases, this is the age of the member on their date of hire.

Entry Age Actuarial Cost Method

An actuarial cost method designed to fund a member's total plan benefit over the course of his or her career. This method yields a normal cost rate, expressed as a level percentage of payroll, which is designed to remain level throughout the member's career.

Funded Ratio

Defined as the Market Value of Assets divided by the Accrued Liability. It is a measure of how well funded a rate plan is. A ratio greater than 100% means the rate plan has more assets than the target established by CalPERS funding policies on the valuation date and the employer need only contribute the Normal Cost. A ratio less than 100% means assets are less than the funding target and contributions in addition to Normal Cost are required.

GASB 68

Statement No. 68 of the Governmental Accounting Standards Board. The accounting standard governing a state or local governmental employer's accounting and financial reporting for pensions.

Normal Cost

The portion of the Present Value of Benefits allocated to the upcoming fiscal year for active employees. The normal cost plus the required amortization of the UAL, if any, make up the required contributions.

Pension Actuary

A business professional proficient in mathematics and statistics who performs the calculations necessary to properly fund a pension plan and allow the plan sponsor to disclose its liabilities. A pension actuary must satisfy the Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States with regard to pensions.

Present Value of Benefits (PVB)

The total dollars needed as of the valuation date to fund all benefits earned in the past or expected to be earned in the future for *current* members.

Unfunded Liability (UAL)

The Accrued Liability minus the Market Value of Assets. If the UAL for a rate plan is positive, the employer is required to make contributions in excess of the Normal Cost.
